### **Contact Industries' Prefinished Components Add Value to Window and Door Lines for OEMs**

Clackamas, Ore. -- Contact Industries has significantly enhanced its prefinishing capabilities, adding a High Performance Coatings Cell to its manufacturing facility in Prineville, Oregon.

The new cell provides OEMs the opportunity to add painted or stained components to their product offerings. Contact is capable of topcoating all products more efficiently with the new higher quality finishes required for OEM, commercial and residential architectural products.

Contact's stain and UV line offers environmentally superior coating and curing and is more cost-effective than jobsite finishing while ensuring a high-quality finish and eliminating jobsite emissions.

"We invested in this new line to offer finish options and advantages to OEMs, designers, and architects," said Bob Horton, Vice President of Manufacturing. "Our high performance coatings cell, combined with our ability to veneer wrap most any substrate, results in a wider array of high quality finished product offerings to the building products industry."

The new line brings a wide range of operating efficiencies and improved finished product performance. Painted and top coat stain with UV cures are spray-applied resulting in excellent coverage of part profiles, such as window and door parts, as well as unique custom-designed architectural components. With applied stain colors and UV curing, VOC and HAP emissions are virtually eliminated, the cure is nearly instantaneous, and the end result offers superior resistance to scratches and chemicals.

#### **About Contact Industries:**

Contact Industries' veneer wrapped solutions and advances in adhesive technology eliminate delamination concerns and allow their products to perform better than the solid woods they replace. Contact Industries is capable of wrapping any species of real wood veneer over profiles in almost any substrate, including metal, vinyl, fiberglass and a variety of wood composite materials. In addition to wood veneers, Contact is also capable of wrapping synthetics such as printed and embossed vinyls and impregnated cellulose over both wood and non-wood substrates. After completing an extensive accreditation process, Contact Industries was awarded Forest Stewardship Council (FSC) chain-of-custody certification. The company is also ISO 9001:2000 certified.
